

Recover **NOW**™

NEAR REALTIME AUDITING

Features:

- ✓ Accelerated overpayment detection
- ✓ Deployed by internal recovery audit teams or ATG teams

Benefits:

- ✓ Puts your money back to work now rather than waiting up to two years
- ✓ Eliminates old vendor claims
- ✓ Improves vendor communications and relationships
- ✓ Enhances vendor negotiation opportunities

Everyone wins when you **get it right sooner.**

WHAT IS IT?

RecoverNow™ is near real-time application of eRecover™ and eResolve™ to accelerate reviews close to the transaction so you put your money back to work now, rather than two years from now, and your vendors see old claims disappear.

Retailers and Vendors have always wanted recovery audits to be closer to the transaction, but the cost of repeating audits throughout the year has been prohibitive.

Therefore, recovery audits have been conducted post annually with claims presented to retailers and vendors 22 months on average after the transaction. Vendors have long complained they are burdened with added administrative cost of researching records from prior years and it is a safe bet that given the long history of recovery auditing they budget for claim deductions. Do you think these costs are reflected in the cost of goods? It certainly explains why more and more vendors are offering better

terms with agreement to discontinue post annual audits.

Everyone wins by getting it right sooner and ATG's latest web application audit tools make this a cost effective reality.

HOW IT WORKS!

With RecoverNow™ you can have your cake and eat it too!

You can detect and correct overpayments within the same financial period for normal adjustment on the next invoice paid. What more could your buyers negotiate with vendors as post annual recovery audit claims are eliminated?

Rather than seeing individual large claims with overpayment accumulated over a full fiscal period, Vendors see small individual invoice line item adjustments that easily pass approval thresholds.
